

Jubilee Browser

Deep Functional & UX Analysis

Task List - Status Report

Legend:

☒ Completed

☐ Pending

Summary

Completed: 22

Pending: 47

Total: 69

Progress: 32%

1. Authentication, Identity & Security

1.1 Sign-Out Flow

☒ Redesign the sign-out confirmation dialog to fully follow the active Jubilee theme (colors, typography, spacing).

☒ Ensure messaging remains intact: confirmation text, local data retention notice, and sync stopping behavior.

☒ Popup should be consistent with other modal dialogs used across the browser.

1.2 Sign-In Experience

☐ Allow users to upload or change a profile picture after successful sign-in.

☒ Ensure the sign-in UI matches the Jubilee Browser design language exactly.

☒ Replace 'Jubilee Outlook' branding text with the approved sub-slogan only.

☒ Ensure error states are clearly communicated via themed modal dialogs.

1.3 Sign-Up Flow

☐ Implement a clean, step-based sign-up flow: user details !' password creation !' verification.

☐ Validate password strength and matching fields before allowing progression.

☐ Checkboxes (terms acceptance, policies) must be functional and validated.

1.4 Email Verification (Critical)

 Send a 6-digit one-time verification code during sign-up.

 Require code validation before account activation.

 Implement the same 6-digit verification for forgot-password and SSO confirmation flows.

 Display clear error messages for expired or invalid codes.

1.5 Forgot Password

 Remove the back arrow from the forgot-password screen (design inconsistency).

 Trigger email delivery with a 6-digit verification code.

 Require successful verification before allowing password reset.

2. Terms of Use & Privacy Policy Handling

 Do not navigate away from the current WPF screen when Terms or Privacy links are clicked.

 Hide existing UI and display a scrollable text area containing the full document.

 Load content dynamically from YAML files: `termsofuse.yaml` and `privacypolicy.yaml`.

 Ensure text area supports scrolling and long-form reading.

 On clicking OK, restore the previous UI state without reloading.

3. Single Sign-On (SSO) & Cross-Domain Authentication

 Ensure Jubilee Inspire websites detect an existing authenticated browser session.

 Automatically sign the user into Jubilee Inspire if SSO session is active.

 Prevent redundant sign-in prompts across Jubilee properties.

 Ensure SSO state is securely validated and encrypted behind the scenes.

4. Tabs, Navigation & Mode Switching

4.1 Tab Types & Behavior

 Yellow tabs represent Bible Web; Blue tabs represent the Worldwide Web.

☐ Ensure Inspire-prefixed URLs remain within Bible Web mode.

4.2 Mode Switching

☐ Switching between globe and Bible icons should reuse the last active tab.

☐ Do not create new tabs when switching modes.

☐ Ensure icon state always reflects the active browsing mode.

4.3 Tab Usability & Bugs

☐ Add visual indicators during tab drag operations.

☐ Implement dynamic tab width shrinking as tab count increases.

☐ Ensure all tabs display a favicon or default globe icon if none exists.

☐ Validate all right-click tab menu actions.

5. Sidebar (Rail) & Embedded Tools

☐ Sidebar must slide in and out smoothly; no abrupt appearance/disappearance.

☐ Clicking the toggle button again should close the sidebar.

☐ Ensure consistent behavior across all browser modes.

5.1 Chat Panel

☐ Decouple the chat from the browser shell embedding.

☐ Load Jubilee Inspire chat directly within the sidebar.

☐ Ensure chat context syncs with the active webpage.

5.2 To-Do List

☐ Complete implementation of the To-Do List feature.

☐ Reduce excessive spacing between list items.

☐ Add default assigned user and status per item.

☐ Implement slide-up edit panel for title and description.

☐ Persist all data within the Codex system.

6. Toolbar, Icons & Visual Fixes

☐ Fix hamburger/menu icon color contrast on yellow background.

☐ Ensure all icons remain visible and accessible in all themes.

☐ Verify favorites/application panels open and close reliably.

7. History & Favorites Panels

☐ Move history panel to the correct designated sidebar.

☐ Redesign history UI for better usability and readability.

☐ Clicking history or favorites icons again should close the panel.

☐ Ensure functionality works for both Bible Web and Worldwide Web.

8. Settings & Preferences (High Effort Area)

☐ Fix all non-functional settings before adding new ones.

☐ Ensure homepage selections are saved and visibly reflected.

☐ Startup options must work: new tab, homepage, continue where left off.

☐ Implement light and dark themes.

☐ Support Google, Bing, and DuckDuckGo search engines.

☐ Ensure font size changes apply immediately.

☐ Downloads folder picker must open OS file dialog.

☐ Verify privacy and site settings toggles are functional.

☐ Remove or disable broken settings like 'About Jubilee' if necessary.

9. Auto-Update System

☐ Ensure published builds auto-update for all installed users.

10. Out-of-Scope (Handled Separately)

 Spiritual Nutrition Score feature.

 Website rating and evaluation logic.
